Criminology: Inside the Criminal Mind

Do you ever wonder about the people who commit crimes? Why do they do it and how are these cases investigated, solved, prosecuted and punished? From the theories behind criminal activity to the various types of crime, law enforcement, the criminal justice system, and the corrections process, you'll take a deep dive into the study of crime. You'll discover the intriguing aspects of this fascinating field and explore the many related career options. Whether you're a true crime enthusiast or considering a career in the criminal justice system, this course is for you!

Warning: The content of this course contains descriptions that include but are not limited to abuse, violence, murder and death. Please take note of these sensitive elements as they may be emotionally troubling.

Required Materials

Physical

- Clear tape
- Construction paper, in a contrasting color to the dust
- Corn starch, baby powder, cocoa powder, or similar fine powder
- Digital Camera
- Measuring tape
- Small, soft-bristled brush
- Video recording device

Software

- Word processing software

Optional

- Audio recording device
- Graphic design software
- Helper
- Honey
- Lotion

- Masking tape
- Presentation software
- Spreadsheet software

Unit 1: The World of Criminology

Are you a true-crime fan or someone who is fascinated by the darker side of human behavior? If so, criminology might be for you. This field seeks to learn not only about why crimes happen and who commits them, but also how to build a safer world. As long as there has been society, there have been people willing to disregard social standards. Criminologists have a lot of ways to look at why these people are willing to do so and the impact that crime has on society. Using proper research methods is essential to get accurate and meaningful results.

Unit 2: Biological and Psychological Theories of Crime

What makes someone become a criminal? Scientists have been asking this for centuries and have come up with many different ideas. Some have thought the answer lay in the body and brain, whereas others looked at psychology. By asking this question, scholars have been providing the basis for modern criminology. Today, we understand more about how the brain and body work, and this provides some new indications of how they shape behavior, so science still has a lot to say about this question. And the answers have legal implications for our justice system when determining whether a person who is mentally ill and commits a crime can be held criminally responsible for their actions.

Unit 3: Sociological Theories of Crime

There are a lot of theories about why crime happens, and many criminologists have looked to society. It is the result of inequity? Bad neighborhoods? Or perhaps is it an indication of broader social failure? These are just a few of the questions that sociology scholars have considered. Crime is a complex problem, and part of effectively addressing it is understanding what causes it, and that requires considering the ways in which society functions well and where there are challenges.

Unit 4: Crimes Against Persons and Property

What is the difference between murder and manslaughter? Or first- and third-degree arson? There are categorizations of crimes to account for different levels of harm and intent. When a person's physical safety is threatened, there are a range of crimes that are committed and distinct charges for the type of

harm. Similarly, property crimes also have very specific descriptions, although these will depend more on the type of property. Understanding the different kinds of crime and the reasons why people commit them is one of the keys to staying safe.

Unit 5: White-Collar and Organized Crime

White-collar crime is among the nation's costliest forms of criminal behavior. Corporations are the site of a lot of crime, both by and against the companies involved. While the type of crime will depend on the nature of the business and the opportunities it creates, the workplace is the scene of a lot of common crimes. In organized crime, crime is the job. These networks specialize in criminal enterprise and operate nationally and internationally. Fortunately, there are enforcement agencies focused on addressing crime, whether it occurs in your neighborhood or on an international scale.

Unit 6: The Criminal Case Process

What happens when a crime is committed? It will set off a chain of events that begins with an investigation and possibly ends with the person who committed the crime going to jail. However, there are a lot of steps in between. Investigating the case will require the collaboration of law enforcement officers and those who analyze evidence. When all the facts are found, the case will enter the court system. In the process, those bringing criminal charges will have to prove that they have solid reasons to believe that they have the right person. If a trial determines that they do, the correctional system will take over. This process brings together many elements of the criminal justice system.

Unit 7: Law Enforcement

Law enforcement officers will spend much of their time working with the public, and often with its most dangerous members. Officers participating in various police procedures must take safety measures to keep the community and themselves safe. Policing involves understanding when and how to de-escalate a situation, and when the use of force may be required. Working with a diverse community is also an important element of law enforcement.

Unit 8: Courts and Corrections

The United States has a complex justice system with specialized courts at both the state and federal level. These venues work together to make sure that all get the fair trial that they are entitled to in the Constitution and have a means to appeal when they fear justice has not been served. If found guilty, those

convicted might enter one of the many different correctional facilities or find themselves subject to monitoring and supervision. Whether working in the courts, the prison system, or other areas of criminology, it is important to maintain safety for those who work in the field and the populations they serve.
